

## Probe GS-P

to measure oxygen of sample temperature to 1600°C

The probe GS-P is designed for the Sensor MF 420-O for sample temperature to 1600 °C. A external pump bring the sample across a filter to the sensor . The output from the pump can be just to bring the sample to a external analyser system for measurement other kind of gases. For pump protection is a additional filter located.

Technical Data	
Sample temperature:	max. 1300°C or max. 1600°C *
Sample probe length:	500 mm, 1000 mm, 1500 mm *
Filter element:	porosity 2μ
Material:	1.4571, Ceramic
